What We Believe

“It's unwise to pay too much, but it's worse to pay too little. When you pay too much, you lose a little money - that's all. When you pay too little, you sometimes lose everything, because the thing you bought was incapable of doing the thing it was bought to do. The common law of business balance prohibits paying a little and getting a lot - it can't be done. If you deal with the lowest bidder, it is well to add something for the risk you run, and if you do that you will have enough to pay for something better”.

John Ruskin 1819-1900

Design, Technology and Innovation = Hygiene, Performance and Longevity

Pegasus Whirlpool Baths are fitted with our 4th Generation pipework, which ensures that all the water in the whirlpool pipework drains naturally to the very last drop.

Every bath has angled sides to enable it to be released from the mould. Water doesn’t run uphill and therefore poorly designed systems can create an ongoing problem with stagnant water. The greater the angle on the side of the bath, the greater the amount of water retained, even those with ‘V’ shaped venturi!

Pegasus 4th Generation pipework is designed to pump water up to the venturi from the base of the bath. When the bath is emptied, the water simply drains down by gravity, out to waste through our special Pegasus system drain Pop-Up-Waste.

Pegasus Pop-Up-Wastes are available either as a standard Pop-Up-Waste or our increasingly popular Bath Fill Pop-Up-Waste.

Our unique 4G pipework, reliable performance and superb customer service - developed through hard work, determination and experience, means the choice simply has to be Pegasus...

Since our family business began in 1987, our customers have appreciated our reliability, our founder Roger’s hands-on experience from the shop floor up, and, of course, our superb customer service. And it’s not just our customers who appreciate what we offer – our workshop manager, Mike Perryman, started with us at 16 years of age, and he’s still with us more than 20 years later. Roger’s daughter Hayley also works with us – providing a continuity of our family ethos that always puts the customer first.

Roger understands what his customers want – simply from his extensive experience in the industry. He’s fitted whirlpool systems, found solutions when faced with challenging service calls (including fixing competitor’s mistakes), and created complex bespoke whirlpool baths.

And customer feedback led to one of Roger’s early innovations, the introduction of back jets – not an easy task in the early days. Roger persevered, and in 1998 introduced his ‘Micro-jets’ design, ensuring easy fitting of back and feet jets, minimising stress on the bath. By 2009, and the introduction of 4th Generation technology (we’ve never been challenged on our drainage system - it works!), Pegasus remains one of the UK’s most respected independent manufacturers of whirlpool baths.

Always innovative, Roger refocused his efforts in 2013, and developed a unique glass control system; with no moving parts this control will never wear out and can be mounted on the bath or, more conveniently, on the wall at the side of the bath. 2015 saw the introduction of our Flush-jet™ technology with powerful jets that protrude less than one millimeter from the bath’s surface. Roger continues to listen to, and learn from customers’ feedback!

Our attention to detail includes manufacturing, with pumps made for us in Europe, and electronics built to our specification and design in Italy. Any components we don’t manufacture ourselves are sourced in the UK, and Europe. The Pegasus’ exceptional warranty (extendable to lifetime) reflects our confidence in the product’s superb build.

Today, Pegasus Whirlpool Baths™ is the successful culmination of almost 30 years of extensive, hands-on experience, always putting our customer first. When it comes to bespoke whirlpool baths, is there really any other choice?
STEP ONE: The Bath
Choose from our extensive range of Pegasus whirlpool baths, which come in many widths, lengths and shapes. Or if you prefer, we can convert virtually any manufacturer’s bath (including BETTE steel baths) into a Pegasus whirlpool bath.

STEP TWO: The Whirlpool Massage
As standard, every bath has four jets either side to massage the hips, thighs, calves and ankles. Each jet can be reinforced with two additional jets, which increase massage effectiveness by triangulating the massage where needed. At the ends of the bath, lumbar and plantar jets massage the back and feet. Choose from our pre-determined jet patterns, or we can help you design your own configuration.

STEP THREE: The Controls
From simple pneumatic controls, or multifunction electronic controls, to our sophisticated touch-sensitive glass ‘Sensations’ controls – we’ll help you choose the optimum controls for your whirlpool bath. Your choice will include system packs for the functions on the controls – see the individual specifications elsewhere in this brochure.

STEP FOUR: The Controls’ Locations
Of course, we have to make sure you have easy, convenient access to your whirlpool bath’s jet controls – whether from a marble plinth or an adjacent tiled wall. Our ‘Whirlpool Bath Planner’ will help you visualise your new whirlpool bath, and then decide on the best locations for the controls, taps and pump.

We also ensure the pump and electronics are in a convenient and accessible location, normally at the end of the bath. While all our system components, including the whirlpool system pack and the waste system, are designed to last, even the best components can sometimes fail and need replacing; easy access makes for a simple fast job.

STEP FIVE: The Finishing Touches
These little extras enhance the already luxurious feel of our whirlpool baths. From flow-controlled inline water heater, to Chromotherapy lighting (standard on our top of the range ‘Sensations’ whirlpool system), we’ll help you add those ultimate finishing touches.

STEP SIX: Talk to Your Installer
Preparing the bathroom, and finalising delivery date are essential tasks for your installer. Your installer can tell you what is, and what is not, possible for your whirlpool bath installation. Your installer will normally want the whirlpool bath (and everything else) on site before starting installation work.

STEP SEVEN: this one is the simplest and most enjoyable of all...
Order your Pegasus Whirlpool Bath™, and look forward to relaxing in hand-built luxury!

If you qualify for VAT relief because of a disability, we can help.
Turbo massage, whirlpool and spa: Experience recovery and relaxation with Pegasus Whirlpool Bath’s choice of jet patterns.

**Massage Jets**
All Pegasus Whirlpool Baths™ start with a minimum of eight whirlpool jets (four jets either side of the bath), with the option of adding lumbar or plantar jets to suit your personal requirements. Additionally, each of the side jets can be reinforced with two more jets each side to provide further massage where required to the hips, thighs, calves and ankles.

Adding Flush-spa™ jets into the base of the bath sends streams of air into the water, increasing buoyancy for the bather. Surplus air from the spa can be channeled into the whirlpool system by our Turbo controller, which effectively turbo-charges the whirlpool jets – wonderful relief for aching backs and feet. Once the aches have eased, move the control into the centre position to increase buoyancy in the bath and further encourage relaxation.

All acrylic baths can be fitted with the choice of Sensa-jet™ or Flush-Jet™; popular request has resulted in all our spa systems being fitted with the Flush-Spa™ jets.

At only .5mm thickness, our Flush-Jets™ have negligible protrusion, ensuring unequalled smoothness on the side of the bath.

**Patterns**
We have a wide variety of jet patterns, or you can bring us your bespoke pattern combinations. A popular choice on double-ended baths is the JL03 & JL04 pattern, incorporated at either end of the bath, and offering relief from high-back problems at one end, while providing benefit to and lower-back problems benefit at the other.

**Steel Baths**
We are proud to fit our whirlpool systems to BETTE Steel baths. We are continually enhancing our Flush-Jets™ technology to enable our Sensa-Jet™ systems to be fitted to virtually the entire range of BETTE steel baths.
Pegasus Whirlpool Bath is your tranquil haven, enhanced through beneficial Hydrotherapy, Chromotherapy and Aromatherapy.

Our stylish and highly functional Pegasus whirlpool control combinations are engineered to complement your bespoke whirlpool bath—ensuring efficient and quiet operation, and adding to your relaxing bathing experience. They are designed for installation in places that enable the bather to easily reach and use them—such as into a wall adjacent to the bath, on a plinth, or even at a convenient location on the bath rim.

An in-line water heater and bath fill waste are optional with any whirlpool system.

**Sensations Control Pack**

The ‘Sensations’ proximity sensitive, glass control system brings a unique sophistication to Pegasus Whirlpool Baths™. There are no moving parts, so it will never wear out, and the control panel can be custom mounted on the bath or an adjacent wall to ensure easy access to its practical functionality.

Water-level sensors prevent the pump from being turned on unless the water in the bath is at least two inches above the jets, making sure the system cannot be operated without sufficient water, thus preventing pump damage. Also included are four Chromotherapy LED lights, to transform your bath into a personal relaxing therapy centre.

Turbo whirlpool is standard, and a popular upgrade to include Flush-Spa™ in the base of the bath, a bathfill waste and an Inline water heater are the only choices needed to be made. Hydro Massage features include whirlpool, spa, a combination of whirlpool and spa, turbo-whirlpool and hydro-pool (turbo whirlpool & spa) with ‘wave’ function and an auto-purge cycle.

**Neptune Control Pack**

This slim-line, electronic gel-pad pressure-activated control adds functionality and options to your whirlpool bath. As standard, all ‘Neptune’ controls add Turbo Whirlpool, water-level sensing and pump protection and a single Chromotherapy light.

As with the Sensations system, Flush-Spa™, inline water heating and a bath fill upgrades are optional, as is the possibility to upgrade the number of chromotherapy lights from one to four.

**Air-Zoning Control Pack**

This long-established favourite has three zones that alternate between on and off, ensuring the air to the jets is directed to one zone at a time; back, feet and sides. Turbo power, provided as standard, is ideal for intense and strong massage to relieve aches and pains.

The control has a traditional round shape, and can be mounted on the surface or inside edge of most baths. Standard functions include: turbo whirlpool, pump protection with water-level sensing. The optional addition of Flush-Spa™ results in more than a dozen massage possibilities!

**Electronic-Plus Control Pack**

The ‘Electronic-Plus’ control adds pump protection and water-level sensing to the functionality of our basic whirlpool system. Pump protection guards against inexperienced users trying to turn on the whirlpool pump with insufficient water in the bath, potentially causing damage to the whirlpool pump. Available functions include: the addition of four Chromotherapy lights, and the Flush-Spa™ function for any whirlpool system with 12 or more venturi jets. The addition of Flush-Spa™ also enables Turbo whirlpool as standard and increases the whirlpool functions to Whirlpool, Spa, Whirlpool and Spa, Turbo whirlpool and Hydropool (turbo whirlpool and spa).

**Pneumatic Control Pack**

Our entry level system, the simple pneumatic on/off control, activates the pump by a puff of air and is coupled with either one or two manual turbulence controls, depending on the number of jets, to regulate the amount of air introduced into the water stream via the venturi jets. The pressure-operated control sends air down a tube to an air-operated switch in the pump, turning it on or off with each press of the control. Operating rather like taps, the air turbulence controls simply turn the air on and off, making the jet massage soft or strong depending on whether the control is open or closed.

**Chromotherapy Lighting**

Our Chromotherapy light technology is incorporated across the entire range of electronic controls: the initial white light can be transformed into any of ten colours, and five light patterns: Sun, Dream, Energy, Relax and Tonic. And our 4th generation pipework technology ensures ultimate hygiene—yes, it may take a little bit longer to install, and cost a little more, but it is worth every extra penny!
Our flagship glass Sensations control was on our wish list for a long, long time.

The glass Sensations control system, produced in Italy to our exacting standards, brings a unique sophistication to Pegasus Whirlpool Baths™.

The design brief for the control was to bring together, in one sophisticated control system, all the features that people have asked us for over the years.

We’ve learned through experience that electronic control pads wear out long before the control box. So… the unique Pegasus glass ‘Sensations’ control has no moving parts, which means it will never wear out, everything works behind the glass by proximity sensing.

The ‘Sensations’ control can be installed on the bath or, better still on the wall adjacent to the bath so that it can be easily seen and used from the bather’s normal position in the bath. It might be easier for us to put controls on the back corners of the bath – but we wouldn’t do that, as we firmly believe the customer is king. We try to mount all our controls forward of the bather so that they can be easily seen and used when relaxing in the bath.

Glass Sensations power adjustment ensures you retain full control of the power levels of the Spa and Turbo, with five levels, and an auto-ramping sequence from very low to maximum. The control is available with three sophisticated colour options; Black, Silver or White.

Available functions include on/off controls for whirlpool, Spa, and Chromotherapy lighting; plus variable speed for the spa and turbo-charged whirlpool; ‘wave’ function; four Chromotherapy lights; water-level sensing and pump protection. The latter ensures the control does not activate until there is sufficient water in the bath. Additionally, the control’s automatic auto-purge cycle, operating after the bath has been emptied, dries the pipework under the bath, keeping it dry, clean and dust free.

The turbo diverter controls the distribution of air to the spa jets or the whirlpool jets, creating a powerful turbo effect that is ideal for the relaxation of aches and pains. Moving the diverter into a central position diverts air into both the spa jets in the base of the bath and the whirlpool jets, promoting slight buoyancy, while keeping the turbo whirlpool active. Turbo systems are particularly important in large or deep-soaking baths with jets more than 8 inches below the water level.

Four chromotherapy lights are included as standard on our flagship ‘Glass Sensations’ control. The light cycle starts at white, then rotates through ten other colours; the five light massage programs are Sun, Dream, Tonic, Relax, and Refresh. And, the wonderful benefits of Chromotherapy can be experienced at any time – the light LEDs generate little or no heat, and can still be used when there is no water in the bath.

The only possible additions to the glass ‘Sensations’ superb specification is an inline heater and the possibility of upgrading the bath waste to a bath fill waste.
This sophisticated Gel-pad adds functionality and user options to your whirlpool bath – with Italian panache

The Neptune system with its innovative Gel-pad control has superb quality and exceptional compactness – also manufactured in our Italian manufacturing facility, and incorporating an elegant sophistication and guaranteed ‘Italian Wellness’.

The slim-line (it’s only 2 millimeters thick!) electronic pad can be installed on most narrow bath ledges, and is always placed forward of the bather, where it can be seen and operated with ease. Alternatively, the control pad can be mounted on an adjacent wall.

The Neptune Gel Pad control includes a single, nine-LED Chromotherapy white light, plus ten other colours, and five light patterns, to provide the true Chromotherapy experience. The single Chromotherapy light can be upgraded to a maximum of four lights. And, the wonderful benefits of Chromotherapy can be experienced at any time – the light LEDs generate little or no heat, and can still be used when there is no water in the bath.

Standard with this system are two basic massage variants, which are the whirlpool and turbo whirlpool. The spa upgrade adds further massage options, including combination whirlpool spa, turbo-whirlpool, and hydropool (turbo whirlpool and spa), and the Turbo Diverter, which sends air to the spa, the whirlpool or both.

The increased massage effect of the powerful 800-watt blower forcing air round the system, effectively turbo charging it, provides a wonderfully intense massage. Of course, the Neptune Gel Pad means you always maintain control over the blower speed and intensity from ‘low’ through five steps to ‘high’.

In addition, when used with the spa, the Pegasus diverter control can guide excess air into the spa jets, increasing the amount of air in the bath to promote mild buoyancy.

Basically, with a standard whirlpool, water is circulated from the bath through a venturi jet, and a pipe linked to the air-turbulence control on top of the bath, which increases the massage effect – this works well down to eight inches below water level. Adding the turbo blower enables more air to be forced into the venturi, thus giving a more powerful massage, especially with jets placed deeper in the bath.

Whirlpool baths fitted with the Neptune Control system can also be uprated to include our super slender Flush-jets™ and, as always, spa jets are standard with Flush-spa™.

Other Neptune Gel Pad control functions include pump protection, water-level sensing, turbo-power option and the essential ‘auto-purge’ after use.

As with all Pegasus whirlpool baths, it is possible to upgrade the waste to a bath fill waste and add an inline water heater.
The Air-zoning control system – a traditional favourite

This traditional, round touchpad control can be mounted on the surface or inside edge of most baths. The touchpad has four buttons that control the various functions of whirlpool, turbo whirlpool, Airzoning, Chromotherapy* lighting and (for a little extra) a spa system fitted with Flush-Spa™. The specification also includes pump protection and a water-level sensor.

Pressing the 'airzoning' button directs the air into jets in three separate zones, one zone at a time. The three zones are back, feet and the two sides.

When a Flush-Spa™ system is added to the specification, the Pegasus Diverter control directs the flow of forced air into the bath, and is the key to many massage options. Turned fully one way directs air to the whirlpool jets; turned fully the opposite direction directs air to the spa nozzle on the base of the bath. In the mid-way position, air is diverted to both the whirlpool jets and the spa nozzles. Turbo power is ideal for intense and strong massage to relieve aches and pains.

Available functions include: a turbo whirlpool system, a spa, and more than a dozen massage options. These are: soft whirlpool; soft whirlpool with air zoning; standard whirlpool; standard whirlpool with air zoning; turbo whirlpool; turbo whirlpool with air zoning; spa; soft whirlpool with spa and air zoning; standard whirlpool with spa; standard whirlpool with spa and air zoning; turbo whirlpool; turbo whirlpool with air zoning; turbo whirlpool with spa; and turbo whirlpool with spa and air zoning.

As always mindful of safety, we’ve made sure that our Air-Zoning system is fitted with a water-level sensor, to ensure there’s at least two inches of water above the jet levels before the whirlpool can be operated.

Additionally, our Air-Zoning system has the advanced pipework technology, which is now standard across our entire range. Fitting baths with 4th generation technology takes a little longer, costs a little more, but in terms of hygiene is worth every extra penny!

Optional upgrades to the Airzoning system include an inline water heater and bath fill waste.
Electronics – the key to safe, secure operation with pump protection and water-level sensing

The ‘Electronic-Plus’ control is the first of two upgrades to our pneumatic manual control system. Its advanced pump protection and water-sensing system guards against inexperienced users who may try to turn on the whirlpool pump with insufficient water in the bath, potentially causing damage to the whirlpool pump.

The Spa system can be added to any whirlpool system with 12 or more venturi jets. Included in the Spa system installation is the Pegasus turbo diverter, which adds a turbo whirlpool to the mix of available massage options. The turbo diverter regulates the amount of air/forced air between the jets and the spa nozzles in the base of the bath, offering the bather a choice of an intense massage from the added turbo power through the whirlpool venturi, or relaxing in the increased buoyancy from the spa jets – or, of course, a happy compromise between the spa and turbo whirlpool.

In addition, we’ve embedded the coding of our Chromotherapy technology into the computer chip, providing a simple and low-cost solution to adding up to four chromotherapy lights to the bath.

Available options include the addition of up to four Chromotherapy lights, the Flush-Spa™ and turbo function for any whirlpool system with 12 or more venturi jets, an inline heater to help maintain the temperature of the water and lastly, upgrading the standard pop-up-waste to a bath fill waste to receive mixed water from a shower diverter valve or a pair of bath fill valves.
Our entry level whirlpool system with manual controls.

Pneumatic controls are renowned for simplicity and reliability. Pegasus whirlpool systems with up to 24 whirlpool jets can use manual controls; for systems with more than 24 jets, we recommend adding a turbo blower (as supplied with the Neptune, Air-Zoning and Sensations whirlpool control packs).

The 8-jet whirlpool system has a pneumatic on-off control and a single air control, while systems with ten or more jets are supplied with an on-off control and two air controls. The latter in its standard configuration controls the back jets with one control and the remaining jets with the other, but can be set up to control any combination of jets.

When Chromotherapy is added, we will substitute the pneumatic on-off control with an upgraded electronic touch-pad which will control both the Chromotherapy and the whirlpool. This upgrade also brings the benefits of pump-protection and water-level-sensing features. Up to four Chromotherapy lights can be controlled by the upgraded touch-pad.

The Pneumatic Whirlpool system can be upgraded to include a manual Flush-Spa™ system with single-speed air pressure, or even an electronic touchpad version with power-variation control and pipework purge.

Uniquely with Pegasus, whenever a spa is added to a whirlpool system, we modify the control system to include a turbo diverter – providing two extra massage options: turbo and Hydropool (turbo whirlpool and spa).

As with all our Pegasus whirlpool systems, the pop-up-waste can be upgraded to a bath fill waste for use with a shower diverter or side bodies. For those who enjoy a long soak, an inline water heater will help to maintain the temperature of the bathwater.
Our 18 jet Flush-Spa™ offers a very gentle bathing and massage experience, relaxing in warm water infused with buoyant, champagne-like bubbles. Most baths will benefit from our standard 18 spa nozzles. For larger baths, up to 6 extra nozzles can be added.

The patented Flush-Spa™ nozzle protrudes less than 2mm from the surface of the bath. Flush-Spa™ incorporates a revolutionary and extremely effective ‘duckbill’ silicone check valve that is designed to limit solids entering the pipework under the bath; it is so far ahead of its competitors that two years ago we upgraded the specification of our spa systems to use only Flush-Spa™.

Flush-Spa™ is a massage system in its own right, or it can be included in any of our whirlpool systems. When added to a Pegasus Whirlpool, we incorporate a Pegasus turbo diverter to regulate the air from the blower into the spa, the whirlpool, or both the whirlpool and spa jets. This diverted air effectively turbo charges the standard venturi effect, considerably increasing jet power, and thus the massage strength.

When added to a whirlpool system, the five massage experiences include: whirlpool, spa, combination whirlpool and spa, turbo whirlpool, and hydropool (turbo whirlpool and spa).

There are two control options, pneumatic and Electronic-Plus. The pneumatic control is a simple on-off where a puff of air is sent to a switch in the blower to turn the turbo blower on and off. The Electronic-Plus touchpad control brings power control and auto purge: when the bath is emptied, the Electronic-Plus system activates the blower with hot air, purging any remaining water from the pipework. Manual purge is also a possibility after showering or cleaning the bath.

When Flush-Spa™ is added to the Sensations, Neptune and Air-zoning Whirlpool systems, the control functionality is already included in the control packs.

Erratum

The check valves in the Flush-Spa™ are designed to limit the entry of water and suspended matter into the pipework.

The integrity of any valve can be compromised and for this reason we do not rely on the valves alone, but recommend that the system is purged after each use of the bath, irrespective of whether the system has been used or not.
Chromotherapy Lighting

Chromotherapy uses the seven colours of the rainbow to promote balance and healing in the mind and body. Also known as colour therapy, light therapy or colourology, it is based on the premise that certain colours are infused with healing energies.

Our modern electronics allow the introduction of chromotherapy lighting into the hydrotherapy experience. Pegasus Chromotherapy lighting provides individual selection of any of the basic seven rainbow colours – true chromotherapy!

Up to four lights can be added to any bath, with eleven individually selectable colours, five light sequences: Energy, Tonic, Relax, Sun and Dream, all designed to promote a wonderful feeling of relaxed wellbeing. The system is an available addition for any bath.

For more information, please ask for a copy of our Chromotherapy brochure.
Aromatherapy Bath Oils

Water stimulates, relax, soothes, regenerates and refreshes – when you add the powerful psychological properties of aroma and colour to your soothing Pegasus whirlpool water massage, you create the ultimate in sensory therapies.

- Immerse yourself in the aromatherapy cloud, rich in essential oils.
- Infuse your body, mind and soul with colour, relaxation, and equilibrium.

Five massage options and pre-set chromotherapy programmes create a welcome escape – after all, where better to seek release from the tension of the hectic everyday world than in the gentle swirling waters of your own bespoke spa?

Chromotherapy lighting’s five options (Energy, Tonic, Relax, Dream and Sun) can be used with or without the whirlpool massage. The air and water action of Pegasus whirlpool baths releases the true potential of essential oils to benefit your mind, body and soul. Enjoy this luxurious, naturally beneficial, hydrotherapy spa experience in the privacy and comfort of your home.

Whirlpool Maintenance

We believe our Pegasus whirlpools systems should keep you relaxed and happy – and that extends even to our maintenance.

We keep it simple, and make sure it works! To start with, when the bath is emptied, the pump and pipework drain completely. Based on the principle of what goes up must come down, our Pegasus unique 4th-Generation (4G) whirlpool pipework design means water is pumped upwards – rather than horizontally as in other systems. And to make sure every last drop has gone, our superior electronic whirlpool systems even have a programmed heated blower that automatically purges the pipework after the bath has emptied.

Then, we supply a hygiene pack – comprising sanitiser tablets, a whirlbath cleanser and a bottle of low-foaming aromatherapy bath oil – with every Pegasus whirlpool bath. The Sanitiser tablets keep your whirlpool bath fresh and sanitised. Simply add a tablet to the water when the bather leaves the bath. Leave it to dissolve, and then circulate through the pipework by operating the system for a couple of minutes. These tablets are particularly useful when children are in the household.

Other than regular sanitising, the basic maintenance of any Pegasus 4G system simply means flushing the system with our whirlbath cleanser seven or eight times a year, depending on usage. The cleanser removes any soapy deposits that may have built up, in much the same way you clean a dishwasher. An after-use rinse of the system dilutes any residue.

We have nothing to hide when it comes to hygiene, and we’re also very proud of our unique 4G pipework system – so we’re happy to let you and our competitors inspect our pipework design before you buy.

For a 360 degree image of our hygienic pipework go to: www.pegasuswhirlpoolbaths.co.uk/sensations

Custom blended to meet your needs

After Sport, Exotica, Made for a Man, Relaxation, Revitalising, Seduction, Skincare, Sensuality, Soothing Soak and Sniffles – Custom hand blended using 3% essential oils.
Features and Benefits Explained

Performance
We source our high-quality, TUV-approved pumps and blowers from leading manufacturers in Europe. These power units are energy efficient, powerful, and carefully matched to our 4th-Generation systems to ensure optimum performance. Our Turbo blowers are manufactured in Germany, and engineered to quietly (less than 63 decibels) produce a high volume of heated air.

Reliability
We hand build our systems to last! Quality components and electronics, manufactured in the UK and Europe, ensure the longevity of Pegasus whirlpool baths. Our comprehensive spare-parts inventory covers most of the systems we have built in the last 25 years, and includes generic parts for our competitors’ systems too!

Pop-up Waste
Every Pegasus whirlpool bath is supplied with our special System Drain Pop-up waste. This waste drains the pump and pipework of every last drop of water and can be upgraded to a bath fill waste to receive mixed water from side bodies or a shower valve.

Water level sensing
Water level sensing prevents the pump from being operated when there is no water in the bath. The water level sensor also signals the heated blower to purge the pipework after the bath has emptied.

Sensa-Jets™
First designed in 1998, we used these jets on all our baths until they were superseded by our Flush-Jets™. (Please note that we still use Sensa-Jets™ when fitting whirlpool systems to BETTE steel baths. (Until our Flush-Jet technology evolves further in 2017).

Flush-Jets™
Introduced in 2014, Flush-Spa™ provides a new concept of flatness, in response to customers’ caution about the protrusion of traditional jets causing them discomfort. (In practice, our jets are positioned so that people do not lie on them; a blocked jet means no massage. Ideally, a bather’s body should be about two or three inches from the jet so the venturi stream can develop.)

Flush-Spa™
Flush-Spa™ is now our standard for all spa jets fitted into the base of an acrylic bath. These check valves have been designed to limit the entry of soapy water and suspended matter into the pipework. The integrity of any valve can be compromised and for this reason we do not rely on the valves alone, but recommended that the system is purged after each use of the bath, irrespective of whether the system has been used or not.

Lauterbach loop
We ensure extra safety for the air blower, as the Lauterbach ‘W’-shaped loop prevents water being transmitted back to the blower – any water surge will transmit through one loop, and then stop. The loop is always used in conjunction with a one-way valve to ensure double safety; should one fail, the other will still function and protect.

Turbo Upgrade
Turbo is standard on our Sensations, Neptune and Air-Zoning whirlpool systems. The turbo option supercharges the natural vacuum action of the venturi jet by forcing air into the venturi. So, instead of the venturi using power to draw air into the water stream, the power of the water stream is significantly increased by virtue of air being forced into the water stream. This increased airflow increases the power of the jets significantly, and is ideal for a power massage on aching joints and muscles at the end of a long hard day.

The effect is especially beneficial in our deep soaking baths where the natural vacuum of a venturi becomes increasingly ineffective at depths of 8 inches or more below the waterline.

Where a Spa is specified, the supercharged air can then be diverted into the spa in the base of the bath to further enhance the bathing experience.
Bath Fill Waste
A Bath-Fill waste introduces water into the bath through the overflow and simply requires a means of controlling the flow and temperature of the bath water such as side bodies or a diverter from a thermostatic shower valve – very popular when fast-growing children are using the bath unsupervised.

In-line water heater
A popular option on larger baths, our in-line water heater is flow controlled for safety reasons – it can’t operate unless there is water in the bath and the whirlpool pump is circulating the water. The heater is factory set at 38 degrees, but can be further adjusted on installation to set a temperature between 30 and 45 degrees (1.2-1.4Kw). Additionally, a small LED control is set on the bath rim to turn the heater on and off.

An inline water heater will only maintain heat in the bath, not heat the water from cold. Generally, a whirlpool system balances out the cooling of the water – yes, there is a greater degree of surface loss due to the ever circulating water, but there is also heat gained from the friction of the water passing through the pump! The pump is spinning at approximately 2800 rpm and, as the water is passed through, it is “mashed” by the impellor as well as compressed as it passes through the pump and pipework, all of which generates friction that in turn produces heat – in practice, if we put a bath on test in the morning and run the pump all day, by the end of the day the water temperature will have gone from cold to about 34 or 35 degrees centigrade.

Extended Warranty
At the end of the regular two-year warranty, most of our competitors will say goodbye to their customers. We don’t! The exceptional pride and quality built into Pegasus systems doesn’t stop – we provide incredible aftersales support for your peace of mind.

At the end of the initial warranty, a small annual payment provides a lifetime extendable warranty – with no time limit. After all, we want you to enjoy your bath for the life of your bathroom, not just for two years! We’ll contact you at the end of the regular two-year warranty and invite you to extend your warranty on an annual basis for as long as you wish.

If you move house, the extendable warranty is transferable, and will pass to the new owner.

And, if your system ever needs repair, you can be assured that Pegasus is probably the largest UK stockist of spare parts. We stock our own parts (going back many years), and generic parts for other orphaned whirlpool systems where the manufacturer is no longer trading.

We use quality parts for our whirlpool systems, and those which we don’t make ourselves are sourced mostly from UK and European manufacturers with a long pedigree in the manufacture of parts – and, like us, a true commitment to their customers.
Acrylic Rectangular Baths

A comprehensive selection of exceptional rectangular baths. These are available in a wide range of styles and sizes, all designed to be fitted with our Pegasus™ whirlpool systems. All baths are manufactured from high quality 5mm acrylic with either a standard A or "Super-Reinforced" S membrane.

Key:
- Acrylic
- Super-Reinforced
Acrylic Luxury and Corner Baths

A choice of outstanding, luxury baths for one or two people. All baths are manufactured from high quality 5mm Acrylic with either a standard A or "Super-Reinforced" S membrane. Baths marked with a C are from the ClearGreen range, using encapsulated recycled composite baseboards, which are stronger than chipboard and greener too! ClearGreen baths use reinforced quality ICI Lucite acrylic and ClearGreen microsphere particles for extra strength. Guaranteed against any manufacturing defects for 10 Years.

Deep Soaking Baths

A collection of high quality deep soaking baths; (one and two person). These are available in a range of sizes, all of which can be fitted with our Pegasus™ whirlpool systems.

Please Note: All bath depths are internal and measured from the bath rim to the drain.
BETTE Steel Baths

An extensive array of finest quality BETTE steel baths, (single and double ended). These are available in a broad compilation of styles and sizes, into which we can fit our Pegasus™ whirlpool systems. All BETTE steel baths have the option to upgrade with "BETTE Glaze" and "BETTE Anti-slip" surface.
When planning your Pegasus Whirlpool Bath, we make sure that you get every feature you have chosen to include, positioned exactly where you want, by producing a "Bath Planner" similar to this one. This planner ensures that we get it right for you, first time!
