

Shallow waste trap waste pipe options

The shallow waste trap has a variety of fitting options to suit most plumbing situations. In its supplied state it can be used with glued pipe as shown in the picture on the left.

Alternatively the 50mm OD section can be removed with a saw and then used with a 40mm/1.5" compression universal pipe connector readily available from most plumbing outlets (Wickes part number 431902). This coupling will allow connection to both glue fit pipe and pushfit pipe - see picture on right.

Top picture on right shows connection between the 41mm Dia OD spigot on the shallow bath trap and 1.5" Gluefit pipe (42mm dia OD). Picture below shows connection to 41mm Dia OD pushfit pipe.

If you know that you are connecting to pushfit pipe (42mm dia), then a standard pushfit connector can be used (Wickes part number 431905) - see picture on left.
